

MODEL	DESCRIPTION
STA70M	ModBus temperature sensor, 24Vac/Vdc
STA71M	ModBus temperature and relative humidity sensor, 24Vac/Vdc
STA72M	ModBus temperature, humidity and motion detector sensor, 24Vac/Vdc

APPLICATION AND USE

STA7xM is a room terminal with a large touchscreen color display that allows the measurement of temperature, humidity and presence depending on the model. Through the large color display it is possible to set temperature and humidity setpoints, set a daily and weekly time table and set the speed of a possible fan as well as virtualize the measured quantities (temperature and humidity) and others such as the outside temperature and the air quality from the reference controller.

It communicates through the ModBus protocol and can be connected to programmable controllers, properly setted, can operate on that network as master devices. Depending on the model, it can be equipped with a temperature sensor or with a temperature and relative humidity sensor or with a temperature, relative humidity and motion detector sensor. The power supply is 24Vac/Vdc and the sensor is mounted on the wall.

For further details refer to the DMP114e product manual.

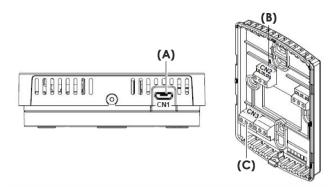

- 1 TouchScreen
- 2 Holes for presence (motion) detection
- 3 Input connector (USB Micro-B port)
- 4 Power Supply
- 5 RS-485 Modbus serial line
- **6** Holes for temperature measurement

WIRING CONNECTIONS

(A) CN1 Usb-Micro B connector

(B) CN2 Connector pitch 5.00m

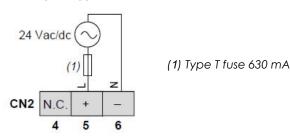

(C) CN3 Connector pitch 5.00m

Use copper conductors only.

Do not connect wires to unused terminals and/or terminals with the words "No connection" (N.C.).

CN₂

POWER SUPPLY

(For UL / CSA compliance, use only SELV - CLASS II power supplies).

Page 1

RS 485 CN3 + - GND + - GND 13 14 15

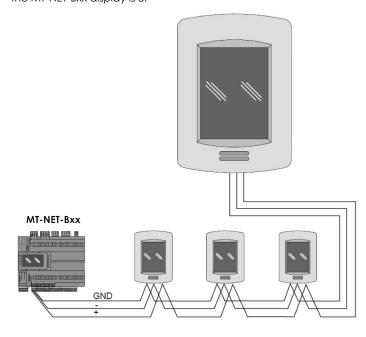

Apply 120Ω termination resistor (if the device is at the end of the RS485 serial line).

CONNECTION DIAGRAMS

The following is a typical Modbus network connection (serial line). The maximum number of STA7xM sensor that can be connected to the MT-NET-Bxx display is 8.

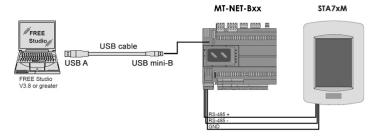

PROGRAMMING

Programming by connection with a PC through USB cable

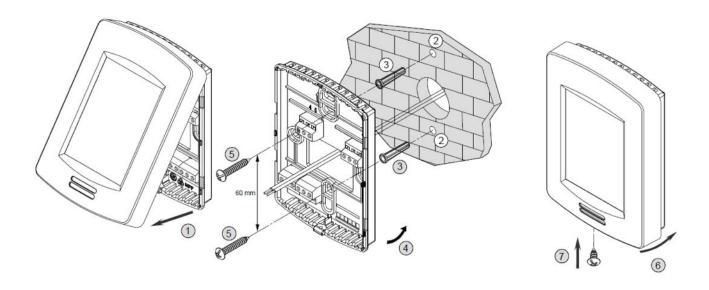

Programming by connection with MT-NET-Bxx

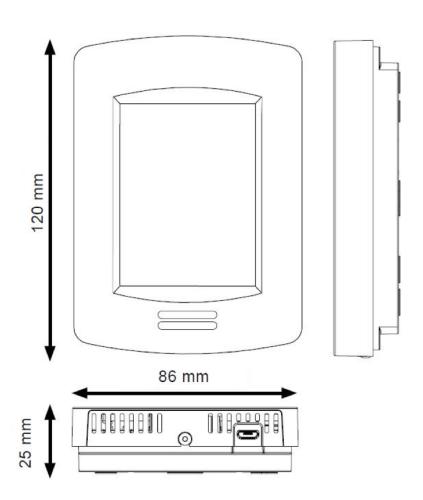

The sensor is supplied already programmed and ready for use.
